

DB4JSGEN(1)

NAME

db4jsgen - generates 4gl code for a basic data-entry screen

SYNOPSIS

db4jsgen -d dbname -t tablename [-bCOL -bCOL] [-flo] program

DESCRIPTION

Db4jsgen generates fourJ's-4GL code and a Makefile to build a basic data-entry screen.

OPTIONS

-d database name

-t table name

-b create "browse" ring option using COL1 and COL2

-f force overwrite of existing files

-l create code for databases with transactions

-o create code for databases using Online

program is the filename that will contain the source code

NOTES

The "bform" generated by Db4jsgen with the -b options will default COL1 to 10 characters and COL2 to 20 characters. Tweak as necessary.
