

DBLIST(1)

(dblist 1.0)

DBLIST(1)

NAME

dblist - dumps the contents of a database table to stdout

SYNOPSIS

dblist -d dbname -t tablename [-i idxname [value] | -h]

DESCRIPTION

Dblist will print the data for all columns in an Informix database table. It has the ability to select an index to sort by and also allows the selection of a starting position within that index.

OPTIONS

-d database name

-t table name

-i index name

value is where in the table the listing will start

-h display header info only

SUPPORT
