

DBREPAIR(1)

(dbrepair 1.1)

DBREPAIR(1)

NAME

dbrepair - repair "dirpath" column in "systables" table

SYNOPSIS

dbrepair -d dbname [-t tablename] [filename]

DESCRIPTION

Dbrepair will generate SQL "update systables set dirpath = %s where tabid = %d" statements for Informix database tables.

OPTIONS

-d database name

-t table name

filename is the name of the file that the SQL statements go in

NOTES

Dbrepair requires that an Informix-SE engine be currently in use on the machine running it.

If a table name is not specified, the entire database is repaired.

Wild-card characters may be used in the table name if desired.

SUPPORT

Send bug reports to Dave Snyder <dave@snide.com>
