

DBROWLOCK(1)

(dbrowlock 1.1)

DBROWLOCK(1)

NAME

dbrowlock - set lock mode of a database table to row-level

SYNOPSIS

dbrowlock -d dbname [-t tablename] [filename]

DESCRIPTION

Dbrowlock will generate SQL "alter table %s lock mode (row)" statements for Informix database tables.

OPTIONS

-d database name

-t table name

filename is the name of the file that the SQL statements go in

NOTES

Dbrowlock requires that an Informix-ONLINE engine be currently in use on the machine running it.

If a table name is not specified, the entire database is altered.

Wild-card characters may be used in the table name if desired.

SUPPORT
