

**DBSYNTAX(1)**

**(dbsyntax 1.0)**

**DBSYNTAX(1)**

**NAME**

dbsyntax - checks the syntax of SQL statements

**SYNOPSIS**

dbsyntax -d database [files...]

**DESCRIPTION**

Dbsyntax will check the syntax of SQL statements. Errors are printed to stdout along with the line that caused the error.

**OPTIONS**

-d database name

**NOTES**

Dbsyntax requires that an Informix database engine be installed on the machine running it.

If a file name is not specified, then stdin is used

**SUPPORT**

Send bug reports to Dave Snyder <[dave@snide.com](mailto:dave@snide.com)>
